## DETAILED ACTION

### *Election/Restriction*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9, drawn to nucleic acids, classified in class 536, subclass 22.1.
  - II. Claims 10-28, drawn to nucleic acid hybridization method, classified in class 435, subclass 6.
  - III. Claims 29-33, drawn to computer program product, classified in class 700, subclass 90+.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the nucleic acid of Group I can be used for the nucleic acid hybridization method of Group II or can be used to make RNA and protein or can be used for antisense nucleic acid preparation for gene therapy.
3. Inventions of Groups I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the

Art Unit: 1634

different inventions of nucleic acids of Group I is not disclosed as capable of use together with computer program product of Group III and it is clear to an ordinary practitioner that nucleic acids are made of nucleotides and used for preparation of RNA and proteins, whereas computer program products (hardwares and softwares) are made of metals and silicon chips and used for data storage, retrieval and communication of the same and therefore they have different modes of structures, operation, different functions, or different effects.

4. Inventions of Groups II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the nucleic acid hybridization method of Group II can be practiced by the computer program product of Group III or can be practiced manually in vitro.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Alan Nadel on September 15, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1634

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
